

Emergency Eye & Woundwash Stations

Ref 1200

Sterowash eye and woundwash stations

The first 10 seconds after the eye has been exposed to a hazardous substance are critical, especially when that substance is corrosive.

Eyewash stations must be fixed to a wall near to the potential hazard. e.g. next to a fork lift charging point as battery acid splashes could cause blindness. Eyewash should be wall mounted where there are toxic, corrosive, acidic, or caustic, chemicals.

Sterowash is perfect to remove sand and dust particles which can damage the eye if not removed quickly.

Sterowash

The 2-in-1 eye and wound wash could save someone's sight!

In an emergency a twist off top makes Sterowash ready for use in a second!

It's also perfect to cleanse wounds to reduce the risk of infection, as its sterile.

Once fixed on the wall where it'll be seen every day, it's there permanently in case of emergency.

With a slimline neck for improved directional accuracy, and a twist off top ready in the blink of an eye, these pods are the only choice in an emergency.

Sterowash saline 20ml pods treat both eyes and wounds and are available on **Drug Tariff**, e.g. as prescribed by your doctor. Class IIA Medical device.

The Ultra Durable Premier Box

Ideal for warehouses, factories, garages etc, as it protects the eye and wound wash, and keeps it clean. These stations are specifically designed for your workplace, you decide which kit you prefer.
